LABORATORY TEST REPORT

Patient Information	Sample Information	Client/Location Information
Name : Lyubochka Svetka	Lab Id : 02232160XXXX	Client Name : Sterling Accuris Buddy
Sex/Age : Male / 41 Y 01-Feb-1982	Registration on : 20-Feb-2023 09:10	Location :
Ref. Id :	Collected at : non SAWPL	Approved on : 20-Feb-2023 12:40 Status : Final
Ref. By :	Collected on : 20-Feb-2023 08:53	Printed On : 28-Feb-2023 10:26
	Sample Type : Urine	Process At : 1. NRL SAWPL Gujarat Ahmedabad Paldi

Biochemistry

Test	Result	Unit	Biological Ref. Interval
Microalbumin (per urine volume) <i>Immuno-turbidimetric</i>	10.50	mg/L	< 16.7

In random urine specimens, normal urinary albumin excretion is below 17 mg/g creatinine for males and below 25 mg/g creatinine for females.(3)

Microalbuminuria is defined as an albumin:creatinine ratio of 17 to 299 for males and 25 to 299 for females.

A ratio of albumin:creatinine of 300 or higher is indicative of overt proteinuria.

Due to biologic variability, positive results should be confirmed by a second, first-morning random or 24-hour timed urine specimen. If there is discrepancy, a third specimen is recommended. When 2 out of 3 results are in the microalbuminuria range, this is evidence for incipient nephropathy and warrants increased efforts at glucose control, blood pressure control, and institution of therapy with an angiotensin-converting-enzyme (ACE) inhibitor (if the patient can tolerate it).
